### Why Your Amazon Listings Aren't Ranking

Before diving into solutions, let's explore common reasons why your products may not be ranking:

1. **Poor Keyword Optimization** – If your listing lacks relevant, high-volume keywords, Amazon's algorithm won't recognize its relevance to customer searches.
2. **Weak Product Titles & Descriptions** – Titles and bullet points must be compelling, keyword-rich, and conversion-focused.
3. **Low-Quality Images & Videos** – Blurry or unprofessional media hurts click-through rates (CTR).
4. **Insufficient Reviews & Ratings** – Products with few or negative reviews rank lower.
5. **Low Sales Velocity** – Amazon prioritizes listings that convert consistently.
